Introduction This course covers the design patterns and implementation of financial models using object oriented programming in C++. It discusses advanced applications on quantitative finance with special emphasis on derivatives pricing and their calculations using commonly known formulas such as the Black-Scholes and lattice models. FE545 Design, Patterns and Derivatives Pricing Joshi also doesn't try to provide an introduction to C++ programming -- there are plenty of good books on this topic. Instead, the author does an excellent job of demonstrating how common C++ design patterns (templates, wrappers, decorators, bridges, factories, and so on) can be applied to price financial derivative instruments.
