Guidance Wrap - [publicisengage.ie](http://publicisengage.ie)

Energy-from-Waste (EfW) is a new guide which offers practical

information to businesses looking at developing small-scale energy-from-waste facilities. This is the first

guide on energy-from-waste to be issued by the Waste and Resources Action Programme (WRAP), since

EfW was first included in its remit.

## Wrap

The guidance includes chapters on: First Guidance on Energy-From-Waste Published by WRAP

... Guidance to explain the planning process and how it affects energy from waste developments 1.0

## Wrap

.uk/efwguidance Glossary -

**WRAP** The development of an EfW plant is complex, with many interlocking requirements for successful delivery. In the most widely used EfW process, waste is burned on a moving grate. Air is introduced above and beneath the grate in carefully controlled amounts to ensure proper combustion. Good combustion means fewer

emissions. Energy from Waste -

**WikiWaste** The relative cost per tonne to build and operate a large EfW facility ~300,000 tonnes per year will be much cheaper than a smaller facility. This is evident in WRAP's recently published 2017 annual gate fee report, which shows a huge range of £50 to £144 per tonne for post-2000 EfW facilities.

**Funding** The challenges of EfW
