evolution proposed by Ernst Haeckel in Germany in the 1860s. It is one of several recapitulation theories, which posit that the stages of development for an animal embryo are the same as other animals' adult stages or forms. Commonly stated as ontogeny recapitulates phylogeny, the biogenetic law theorizes that the stages an animal embryo undergoes during development are a chronological replay of that species' past evolutionary forms. Ernst Haeckel's Biogenetic Law (1866) | The Embryo Project ... Summed up in the catchy statement, "Ontogeny recapitulates phylogeny," recapitulation theory (also known as the biogenetic law) was popularized by Ernst Haeckel's nineteenth century illustrations comparing animal and

human embryos. Recapitulation Theory | Answers in Genesis According to the recapitulation theory, chick during its development, should first resemble a fish, later an amphibian followed by a reptile. However, this does not occur. The chick embryo resembles a fish embryo, an amphibian embryo and a reptilian embryo in the last. Therefore, the recapitulation theory in its modern modified form can be stated as “ontogeny of an animal repeats the fundamental steps of the ontogeny of ancestral forms”. Essay on the History of Embryology (2476 Words) | Biology the theory formulated by E.H. Haeckel that people during their embryonic development pass through stages similar in general structural plan to the stages their species

passed through in its evolution; more technically phrased, the theory that ontogeny is an abbreviated recapitulation of phylogeny. Recapitulation in embryology | definition of ... Recapitulation Theory: How Embryology Does Not Prove Evolution... Do developing embryos replay the evolutionary history of their species as they develop? Recapitulation Theory: How Embryology... - Intelligent and ... Von Baer's laws of embryology provided a framework to research the relationships and patterns between the development of different classes of organisms, and the patterns between ontogeny and the diversification of species on Earth (phylogeny). Von Baer's laws, published in 1828, responded to Johann Friedrich Meckel 's recapitulation

theory. Karl Ernst von Baer's Laws of Embryology | The Embryo ... Haeckel used embryology extensively in his recapitulation theory, which embodied a progressive, almost linear model of evolution. Darwin was cautious about such histories, and had already noted that von Baer's laws of embryology supported his idea of complex branching. On the Origin of Species - Wikipedia According to the recapitulation theory, early human embryos have structures like gill slits, so therefore early human embryos represent the form of adult fish, which also have gill slits. Comparative Embryology - Evidence for Evolution The theory of recapitulation is often known as ontogeny recapitulates phylogeny. It was an idea of Étienne Serres in 1824–26.

In 1886 Ernst Haeckel proposed that the embryonic development of an individual organism followed the same path as the evolutionary history of its species. It is also called the biogenetic law or embryological parallelism. It was a theory that tied evolution with embryology. The theory basically stated that before they are born, organisms pass through developmental ... Recapitulation theory - Simple English Wikipedia, the free ... The theory of recapitulation, also called the biogenetic law is encapsulated in the phrase - Ontogeny recapitulate phlogeny. the theory of embryonic recapitulation in 1866. His conclusion, as Dr. Benumof correctly noted, was “Ontogeny recapitulates phylogeny.” However, Haeckel lacked evidence supporting his views so he fraudulently changed some of the drawings of other scientists in order to increase the resemblance between species and to hide dissimilarities.
