Fluid mechanics is essentially an experimental subject, and similarity laws in one form or another are

its natural background. Various types of similarity are possible: in the first place there is geometric similarity between the model and the prototype. If the ratio of any two corresponding dimensions in the two systems is a constant then there is geometric similarity.

The mechanics of fluids is a type of mechanics: it looks at the movement of matter when under the influence of forces. This chapter places fluid mechanics back into the general framework of the initial concepts for all kinds of mechanics. It defines what fluid is and which of this matter's main characteristics are useful to know.
