Guidelines For Vapor Cloud Explosion This guide provides an overview of methods for estimating the characteristics of vapor cloud explosions, flash fires, and boiling-liquid-expanding-vapor explosions (BLEVEs) for practicing engineers. It has been updated to include advanced modeling technology, especially with respect to vapor cloud modeling and the use of computational fluid dynamics. vapor cloud explosions in detail. As described in Chapter 2, a vapor cloud explosion is the result of a release of flammable material in the atmosphere, a subsequent dispersion phase, and, after some delay, an ignition of the vapor cloud. BASIC PRINCIPLES OF VAPOR CLOUD EXPLOSIONS caused by the outdoor release and delayed ignition of a flammable vapor cloud, This guideline uses a TNT equivalency methodology to evaluate approximate effects of a worst credible case vapor cloud explosion (VCE). Other refined VCE prediction or estimation methods, While briefly discussed, are beyond the scope of this document. FM Global Property Loss Prevention Data Sheet 7-42 (2008). When an explosion is initiated, surrounding flammable gas is pushed to accelerate the speed when passing a narrow space, and at the result, VCE occurs. So in open space (outdoor) and not congested area, VCE may not occur in general. VCE/BLEVE/Fireball, Flash Fire - FPEC Corporation I call it "The clue everyone missed". That isn't a vapor cloud expanding outward from a surface explosion. It's a vapor cloud blasting straight up, in a separate location from the explosion (I estimate 150ish yards away).
