Melamine in Tableware Questions and Answers | FDA

Methanol is a liquid petrochemical made up of four parts hydrogen, one part oxygen, and one part carbon (CH_3OH). In small amounts and low concentrations, it's a "naturally occurring" substance, produced by living organisms, and manufactured from a variety of organic and inorganic sources. Today, methanol is typically manufactured commercially from natural gas in catalytic plants located in regions with plentiful hydrocarbon feed stock reserves such as the Persian Gulf, Caribbean
