Mitosis And Meiosis Pre

Lab Introduction: All cells come from preexisting cells and eukaryotic cells must undergo mitosis in order to form new cells. The replication of a cell is part of the overall cell cycle (Figure 1) which is composed of interphase and M phase (mitotic phase). M phase, which consists of mitosis and cytokinesis, is the portion of the cell cycle where the cell divides, reproducing itself. Lab 9: Mitosis and Meiosis - Biology

Mitosis and Meiosis ... Mitosis is usually used for the growth and replacement of somatic cells, while meiosis produces the gametes or spores used in an organism's reproduction. Mitosis is the first of these studied in this lab. It is easily observed in cells that are growing at a rapid pace such as whitefish blastula or onion root tips, which are used in this lab. Mitosis - BIOLOGY JUNCTION For organisms to grow and reproduce, cells must divide. Mitosis and meiosis are both processes of cell division, but their outcomes are very different. In this laboratory, you will: Study the process of mitosis in plant and/or animal cells using slides of onion root tips or whitefish blastulae. Review the process of meiosis in a simulation activity with beads, and then investigate crossing over during meiosis in a fungus.
