Pediatric Cataract

Surgery Rehabilitating the eye and the brain after cataract surgery may be considered a marathon that extends over years. Some children will start wearing contact lenses in the first month of life. Some will be patched to occlude one eye at a time for asymmetric vision for years to maximize vision. Cataract surgery for infants and children - Mayo Clinic The most common cataract surgery risks include: glaucoma, detached retina, infection, and the need for more surgery Pediatric Cataracts Cataract surgery is performed at Children's Hospital of Philadelphia's Main Campus location. Depending on the age of your child, an artificial plastic

lens may be placed in the eye during the initial cataract surgery. This is how adult cataract surgery is done. Typically, in patients less than 1 year of age, no intraocular lens is placed. Cataracts in Children Unlike adult cataract surgery, general anesthesia is needed for pediatric cataract surgery. This means it will take place at our state-of-the-art Pediatric Cataract Center, at the Bristol-Myers Squibb Children's Hospital (BMSCH). It is an outpatient procedure, so you and your child will be able to return home on the same day. PEDIATRIC CATARACT SURGERY Pediatric Cataracts Although cataracts are very common in adults — cataract surgery is one of the most commonly performed operations in

the United States — cataracts in newborns and children are relatively rare and require specialized care. Cataracts form when the naturally clear lens within the eye becomes cloudy. Pediatric Cataracts However, no surgical procedure is without risks. The risks of pediatric cataract surgery include infection, inflammation, retinal detachment, development of glaucoma, displacement of the intraocular lens, development of capsular cloudiness and development of vitreous cloudiness. Cataract - American Association for Pediatric ... Not all pediatric cataracts require surgery. A small, partial or paracentral cataract can be managed by observation. Pharmacologic pupillary dilation with

phenylephrine or tropicamide can be helpful. Dilation with atropine should be avoided as it is amblyogenic due to the cycloplegia. Cataracts in Children, Congenital and Acquired Adult cataract surgery is a major emphasis of residency training programs in ophthalmology. The skills needed to perform adult cataract surgery are also important for performing pediatric cataract surgery, but additional skills are needed for the pediatric surgery. Pediatric Cataracts: Overview Abstract: Cataract is a significant cause of visual disability in the pediatric population worldwide and can significantly impact the neurobiological development of a child. Early diagnosis and prompt surgical

intervention is critical to prevent irreversible amblyopia. Pediatric cataract: challenges and future directions The only treatment for cataracts is surgery to remove them. If your child's cataract is small and doesn't affect her vision, it may not need to be removed. If it does affect her eyesight, it ... Cataracts in Babies and Children: What to Know The lens capsule surrounds the eye's lens. Cataract surgery removes the front part of the lens but leaves the back in place. That's where you may get a secondary cataract, also called posterior ... Complications of Cataract Surgery GENERAL TECHNIQUES Deep general anaesthesia is required Pediatric cataracts are soft - lens material can be aspirated through incisions

that are 1-1.5mm long at the limbus ; can be subjected to lensectomy through pars plana A larger wound is needed to introduce IOL Tunnel should be securely sutured to prevent dehiscence of wound with iris incarceration Pediatric cataract Unlike adult cataract surgery, pediatric cataract surgery requires a multidisciplinary approach that monitors and treats all aspects of vision and vision-related function in these growing children.... Updates in pediatric cataract surgery Cataract surgery in children is performed under general anesthesia in the operating room. In some cases, a lens may be implanted inside the eye. This plastic lens implant is held in place by a natural membrane. Make sure to discuss the surgery in detail with

your child's doctor. Pediatric Surgery - Cataracts Atlanta Cataract surgery in children with congenital cataract is complex and challenging, and proper management is essential to prevent permanent vision loss. The aim of congenital cataract surgery is to provide and maintain a clear visual axis and a focused retinal image. Pediatric Cataract Management Guidelines In pediatric cataract surgery, some technical aspects of surgery, changing refractions and functional outcomes continue to pose significant problems. Primary management of the posterior capsule is... Pediatric cataract surgery with IOL implantation remains a ... With modern instrumentation and techniques, cataract surgery

performed by a pediatric ophthalmologist is considered safe and effective. Problems Related to Cataracts Pediatric cataracts can also cause eye wiggling (nystagmus) or amblyopia (lazy vision). Pediatric cataracts | Pediatric Eyes Pediatric cataract surgery is an intricate procedure. It's carried out by a specialist eye surgeon using techniques and equipment that differs from that of adult cataract operations. This is because infants and children's eyes are not yet full size and the connections between the eyes and the brain are not yet fully formed.
