Water's polarity lends it to be attracted to other water molecules. The hydrogen bonds in water hold other water molecules together. Due to water's cohesiveness: Liquid water has surface tension. 5 Properties of Water - Owlcation - Education Water is a molecule made up of two hydrogen atoms and one oxygen atom. It has the formula  $H_2O$ . When oxygen and hydrogen combine (H-O-H) they form a v-shaped triangular molecule. While water molecules are electrically neutral, the oxygen atom holds a small negative charge and the two hydrogen atoms hold small positive charges.
