Treatment Threatened abortion is vaginal bleeding without cervical dilation occurring during this time frame and indicating that spontaneous abortion may occur in a woman with a confirmed viable intrauterine pregnancy. Diagnosis is by clinical criteria and ultrasonography. Treatment is usually expectant observation for threatened abortion and, if spontaneous abortion has occurred or appears unavoidable, observation or uterine

evacuation. Spontaneous Abortion - Gynecology and Obstetrics - Merck ... Threatened abortion is vaginal bleeding without cervical enlargement happening during this period and demonstrating that spontaneous abortion may happen in a lady with a confirmed viable intrauterine pregnancy. Diagnosis is by clinical measures and ultrasonography. Treatment is typically expectant observation for threatened abortion and, if spontaneous abortion has happened or seems unavoidable, perception or uterine

evacuation. Spontaneous Abortion: Its Causes, Diagnosis, And Treatment ... Surgical treatment.

Another option is a minor surgical procedure called suction dilation and curettage (D&C). During this procedure, your health care provider dilates your cervix and removes tissue from the inside of your uterus. Complications are rare, but they might include damage to the connective tissue of your cervix or the uterine wall. Miscarriage - Diagnosis and treatment - Mayo Clinic Dilatation and curettage is the traditional treatment for spontaneous abortion; manual vacuum

aspiration is another surgical option. Management of Spontaneous Abortion - American Family Physician A woman at 6-8 weeks' gestation presented with vaginal bleeding and abdominal pain. Although afebrile, the patient was hypotensive, tachycardic, and tachypneic.
