The Design Of Rijndael By Written by Joan Daemen and Vincent Rijmen, creators of Rijndael; the book presents a unique perspective. The book is about the design and architecture of the algorithm. The authors note that the book was written for two kinds of readers. The largest group of readers will be those who want to read a full and unambiguous decryption of Rijndael. The Design of Rijndael: AES - The Advanced Encryption ... This book by the designers of the block cipher presents Rijndael from scratch. Look at the Advanced Encryption ... The Rijndael algorithm is a new generation symmetric block cipher that supports key sizes of 128, 192 and 256 bits, with data handled in 128-bit blocks - however, in excess of AES design criteria, the block sizes can mirror those of the keys. Rijndael uses a variable number of rounds, depending on key/block sizes, as follows: What is Rijndael? - Definition from WhatIs.com The Advanced Encryption Standard, also known by its original name Rijndael, is a specification for the encryption of electronic data established by the U.S. National Institute of Standards and Technology in 2001. AES is a subset of the Rijndael block cipher developed by two Belgian cryptographers, Vincent Rijmen and Joan Daemen, who submitted a

proposal to NIST during the AES selection process. Rijndael is a family of ciphers with different key and block sizes. For AES, NIST selected three members: Advanced Encryption Standard -
