The Development Of Outer Space The Development of Outer Space: Sovereignty and Property Rights in International Space Law argues that the res communis principle enshrined in the Outer Space Treaty was misrepresented here, with essential help from corporate lobbyists whose real object was the defeat of the Law of the Sea Convention. Thomas Gangale builds the legal case for reviving the moribund Moon Agreement as a prelude to negotiating a second Moon treaty to establish a regulatory regime for the exploitation of ... academics and leaders in business and science are challenged to use this framework to create lasting, economically effective and healthy societies in a world with finite resources. Benefits of space: Sustainable Development The militarisation of space involves the placement and development of weaponry and military technology in outer space. The early exploration of space in the mid-20th century had, in part, a military motivation, as the United States and the Soviet Union used it as an opportunity to demonstrate ballistic-missile technology and other technologies having the potential for military application. Outer space has since been used as an operating location for military spacecraft such as imaging and commun Militarisation

involvement with the outer space. Current Trends and Challenges in International Space Law Further development of the Long March rocket series allowed the PRC to initiate a commercial launch program in 1985, which has since launched more than 50 foreign satellites, primarily for European, African and Asian interests. The next crewed space program was even more ambitious and proposed in March 1986, as Astronautics plan 863-2. This consisted of a crewed spacecraft (Project 863-204) used to ferry astronaut crews to a space station (Project 863-205).
